

Miscellaneous Surgery Notes

Even regular flashlights can be used. It is very useful To make some sort of stand to hold the light. A very simple stand can even be made from a wire clothes hanger.

The stand will hold the light steady, and the intensity/ area covered can be adjusted by moving the light closer or farther away from the surgery site.

A small “flip-top” Eppendorph tube is useful for collecting blood, and holding tail tips or ear punch tissue for DNA analysis.
